

Official Wahoo ELEMNT instructions can be found here: <https://uk.wahoofitness.com/instructions/elemnt>

The ELEMNT is synced with the generic Penge CC Wahoo RidewithGPS account -- please **do not** pair it to your own RidewithGPS account as that means the Wahoos will forget all the Penge routes! If you'd like new routes added, please just ask me to do it. My contact details:

- Email: plasticniki@gmail.com
- Whatsapp: 07889503149

Wahoo ELEMNTS are designed to be used with a smartphone. I have set up the devices using my Wahoo account and my smartphone. If anything about the setup bothers you, please let me know. If you really want to pair it to your own smartphone that's fine, you can follow the instructions above, but again, don't pair any RidewithGPS / Strava (etc) accounts with the ELEMNTS.

Button functionality:

Once you've turned the device on, press the PAGE button until a map appears. Then press ROUTE. Use the scroll buttons to select the route you want to ride. The menus should look a bit like the picture below. Once you've loaded the route and are following it, you can press the ROUTE button when on the map page and you'll be presented with the next turns you have to take, as well as how much further you have to go.

That's all there is to it really. If you'd like to set up your Strava account with the Wahoo please ask me. To charge the devices just use a regular USB cable (there should be one in the box, but you'll need a plug) - the input is on the back of the device. In the box are three different mounts; the stem mount uses cable ties so I'd avoid using that. The out-front mount attaches to your handlebars using an allen key.
